RECEIVED

MAR 6 1986

U.S. EPA, REGION 5  
WASTE MANAGEMENT DIVISION  
HAZARDOUS WASTE ENFORCEMENT GROUP

To Whom It May Concern:

Subject: Consent Decree Action 80-73699

I have enclosed copies of plot plans of the Riverview site showing the location of the monitor wells.

No core data was obtained during drilling. According to the Consent Decree, depths were determined by a "visual observation" to verify the interface with the underlying impervious zone. Drilling activities were witnessed by J. Shauver, F. Belobradich, L. Lipinski, and P. Miller.

Well 7 was installed 100 feet east due to access difficulty. Well 7 was eventually abandoned and No. 10 was installed as a replacement updip well. This was done with DNR approval.

In accordance with terms of the Consent Decree which specifies that in sampling wells where more than 6 feet of water are found in the well above interface depth (after 3 days' stabilization) (p. 16.b), a "shallow" well will be installed nearby. This was done June 19, 1985 at the location of Well 6. At this time, Wells 4 (east), 7, 8 and 10 were plugged and pulled since they showed no fluid, leaving 10 wells at 7 locations (at 1, 2 deep, 2 shallow, 3 deep, 3 shallow, 4, 5, 6 deep, 6 shallow, and 9).

If there are any questions, please advise.

Yours very truly,

  
C. W. Axce  
General Manager - Wyandotte
